Overview

Ear Phone Grip

Protect your phone with an Ear case. This phone case is designed to resemble human skin with a grip that resembles an Ear!

The flesh-inspired case not only protects your smartphone—it also lets you have a better grip by attaching the ear to a PopSocket!

Color Match Skin

Use flexible filament made for prosthetics to match skin tones, if you wish.
Editable Phone case

Edit the phone case to fit any phone model. 3D scan an ear or search for an existing scan to modify. Compatible with any PopSocket, the grip securely attaches to the flexible filament.

Multiple view angles

The ear shape allows the phone to sit any different angles by simply rotating the ear to get the best view while watching videos.

Slicing Parts
Slice settings for NinjaFlex 85a material.

The parts were sliced using CURA using the slice settings below.

230c extruder
0.3 Initial layer height
.2 layer height
10% gyroid infill
50mm/s print speed
50c heated bed
Assemble

Attach base
Position the base on the back of the printed case. Peel the backing and place on top. Make sure to set the position correctly as the adhesive will securely bond to the cover after a day.

Base cover
The optional base cover is place on top to color match the base.

Align the Grip to the base and twist to securely attach to the base.
Attach ear

Use double stick tape or hot glue to attach the ear to the grip.

Firmly press the ear to adhere to the grip.

Piercing

The flexible filament allows you to add additional accessories like ear rings. Use tweezers to poke a hole through the lobe and attach ear rings!
