Overview

This tutorial covers a step-by-step guide to:

1. Set up the Simulink support package for Arduino
2. Build a simple Simulink model for controlling Arduino Uno
3. Generate, download and run code on the Arduino to blink an LED

This is the first tutorial in a series on using Simulink to program an Arduino.

Parts and Software

Software

MATLAB and Simulink Student Suite Release 2014a - now available for 99 \$

- [MathWorks](http://adafru.it/d5E) (<http://adafru.it/d5E>)
- [Amazon US](http://adafru.it/eoc) (<http://adafru.it/eoc>)
- [Amazon UK](http://adafru.it/eod) (<http://adafru.it/eod>)

If you are not a student, you can purchase the MATLAB Home-Use license:

- [MATLAB home-use](http://adafru.it/eoe) (<http://adafru.it/eoe>)

Hardware

1. [Small breadboard](http://adafru.it/64) (<http://adafru.it/64>)
2. 220 Ohm resistor
3. [LED](http://adafru.it/845) (<http://adafru.it/845>)
4. [Connecting wires](http://adafru.it/153) (<http://adafru.it/153>)
5. [Arduino Uno](http://adafru.it/50) (<http://adafru.it/50>)
6. [USB connector](http://adafru.it/62) (<http://adafru.it/62>)

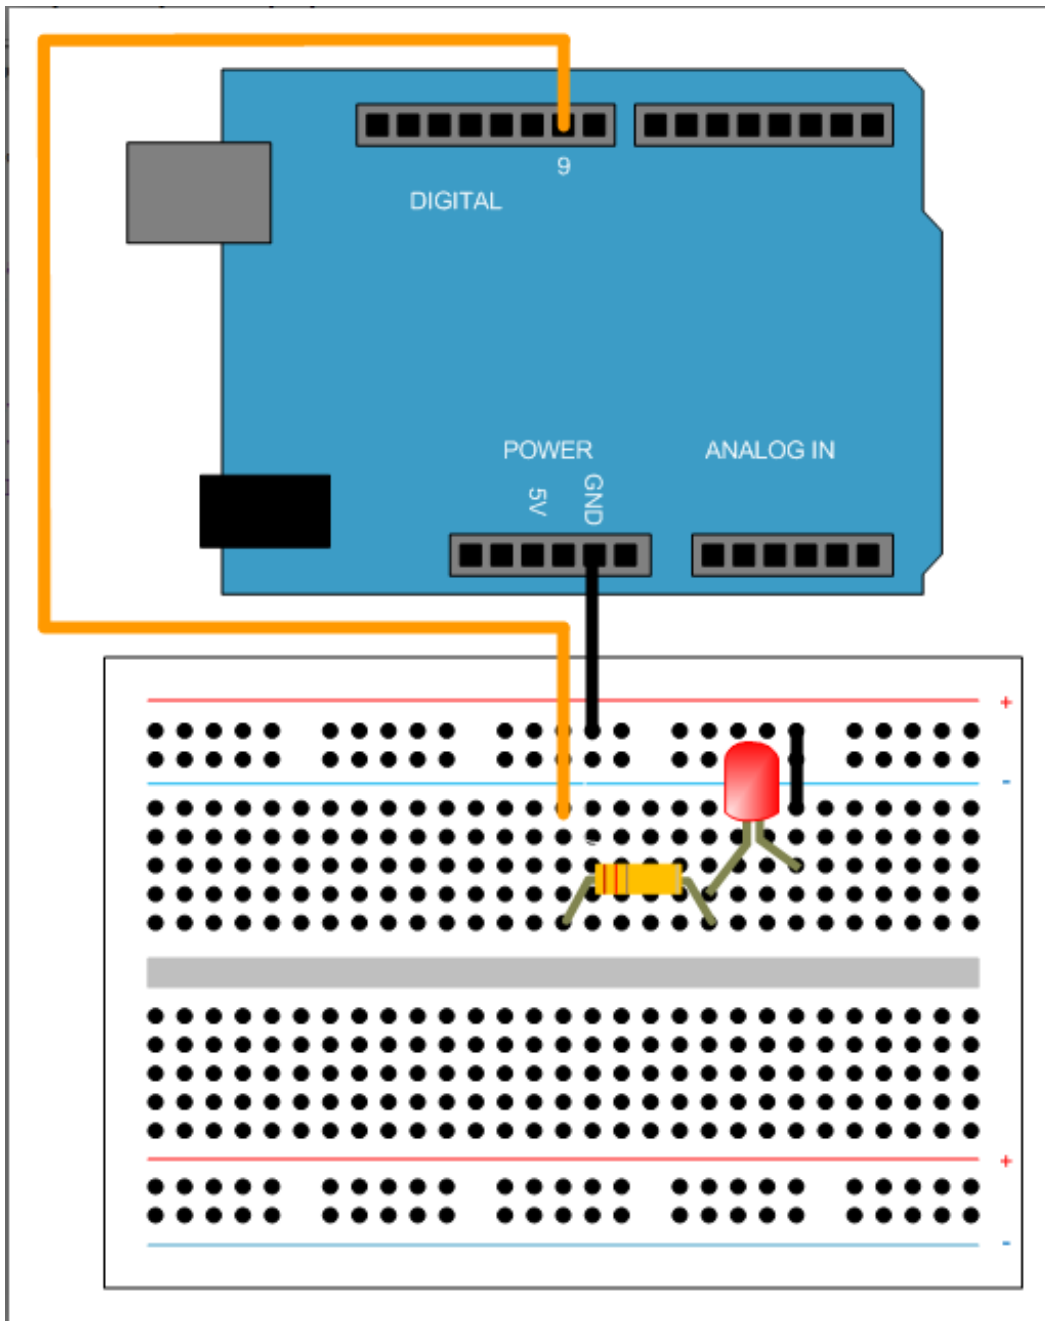

Build the circuit

Circuit

Use the following image to build a simple circuit that connects an LED to pin 9 of Arduino Uno.

Connect the hardware

Using the USB connector, connect Arduino Uno to the computer that has a MATLAB & Simulink installation.

Set up compiler support

Install a supported compiler

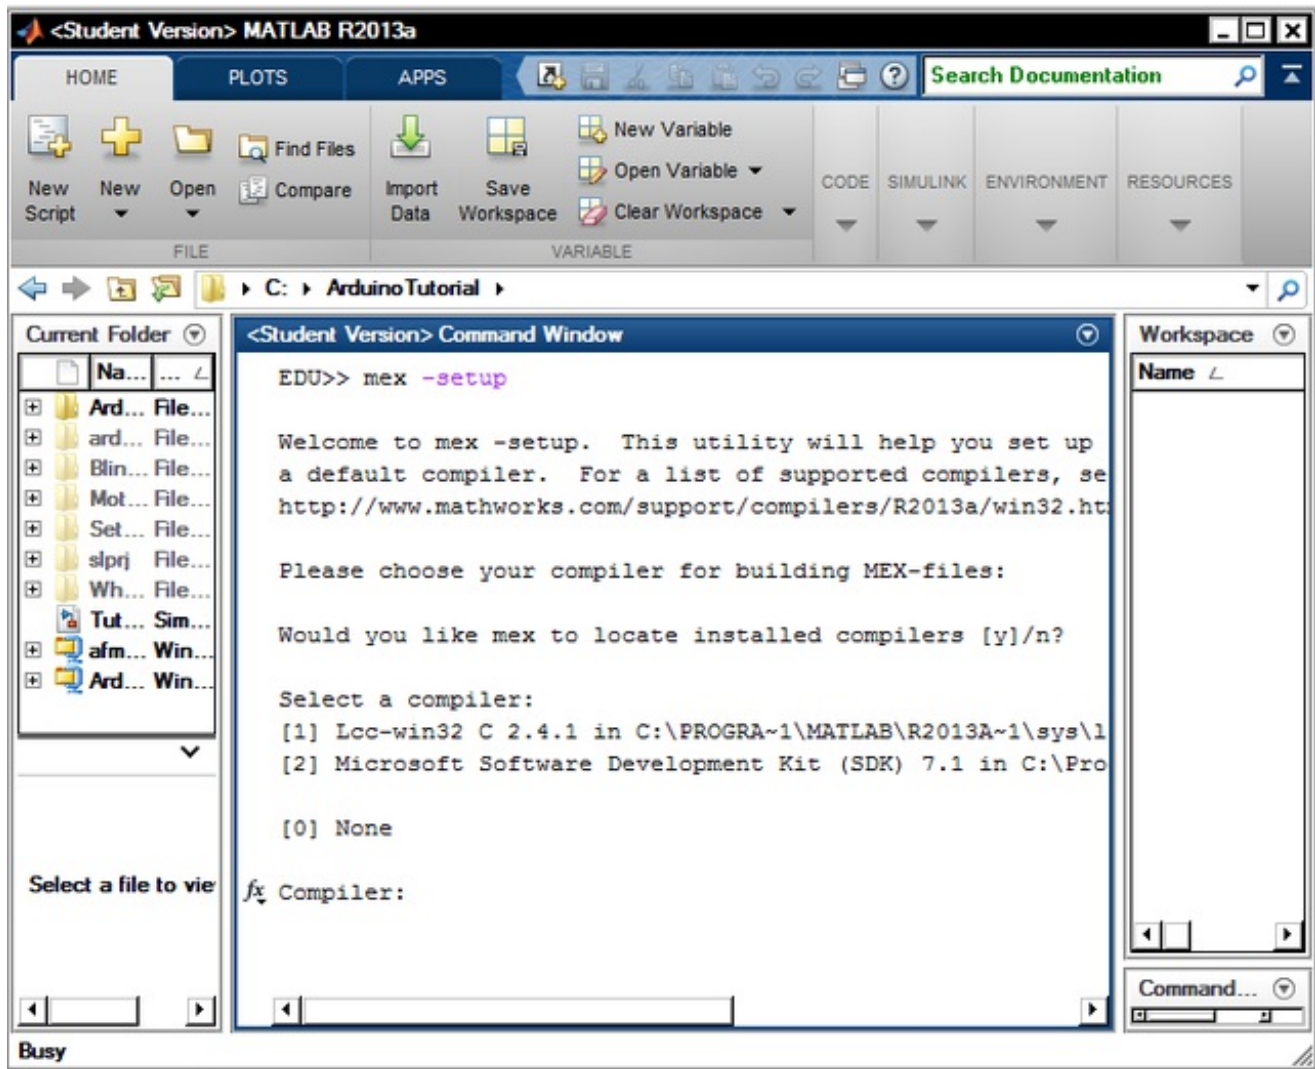

Simulink support package for Arduino is supported on 32-bit and 64-bit Microsoft Windows and Mac OS X. For the code generation process to work, a supported compiler installation is required. Refer to the following page on MathWorks website for a list of supported compilers on Windows and Mac OS:

[List of supported compilers \(http://adafru.it/eof\)](http://adafru.it/eof)

For example, you can download a Simulink supported compiler from the [Microsoft website \(http://adafru.it/d5J\)](http://adafru.it/d5J) for free.

Compiler set up in MATLAB

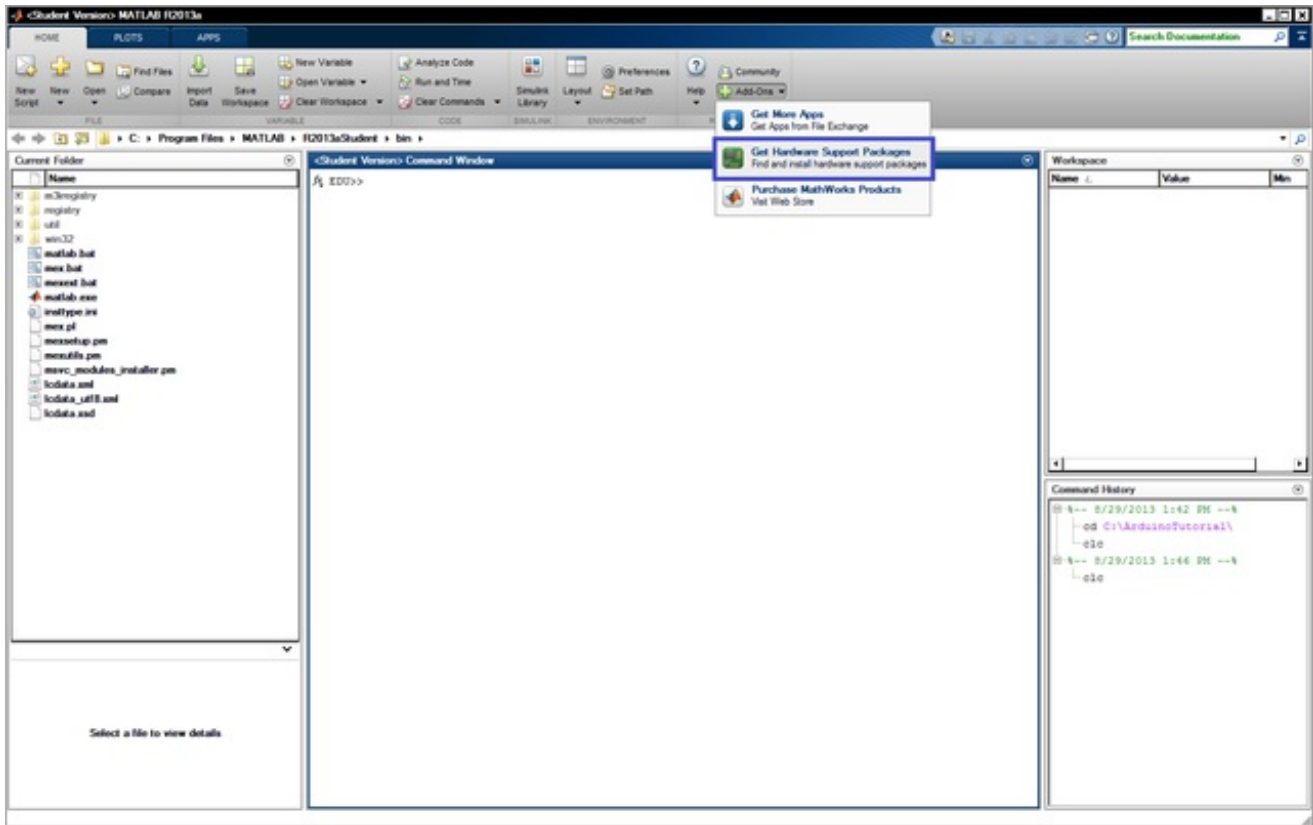

Enter `mex -setup` at the MATLAB command prompt to start the compiler set up. Enter `y` to see a list of installed compilers. Enter the number corresponding to your preferred compiler. Confirm your selection and the compiler set up is complete.

Set up Simulink support package for Arduino

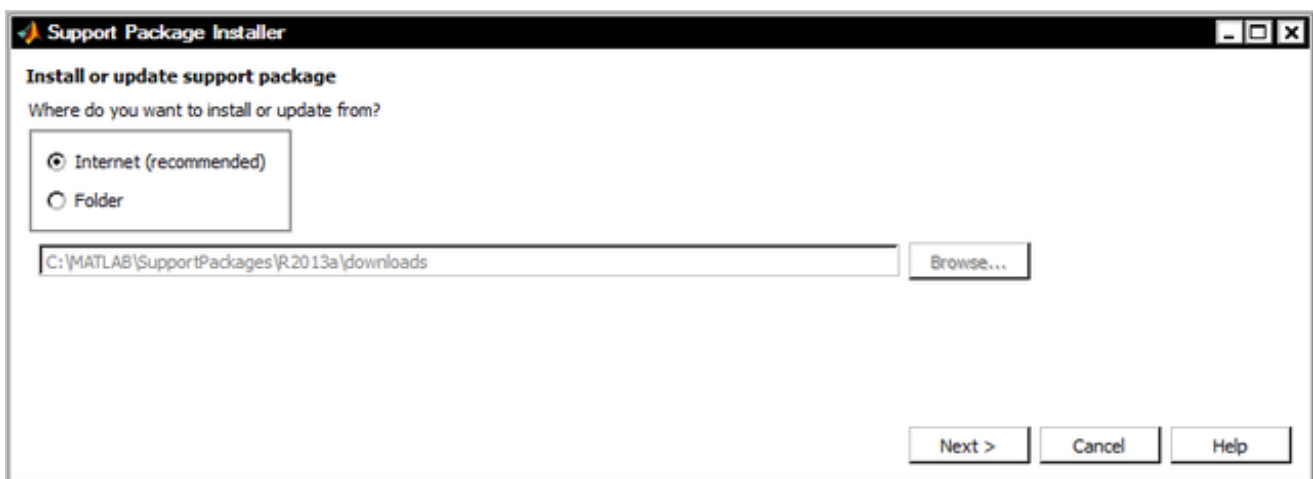

Start MATLAB

Open MATLAB and click the Add-Ons drop down menu on the top right

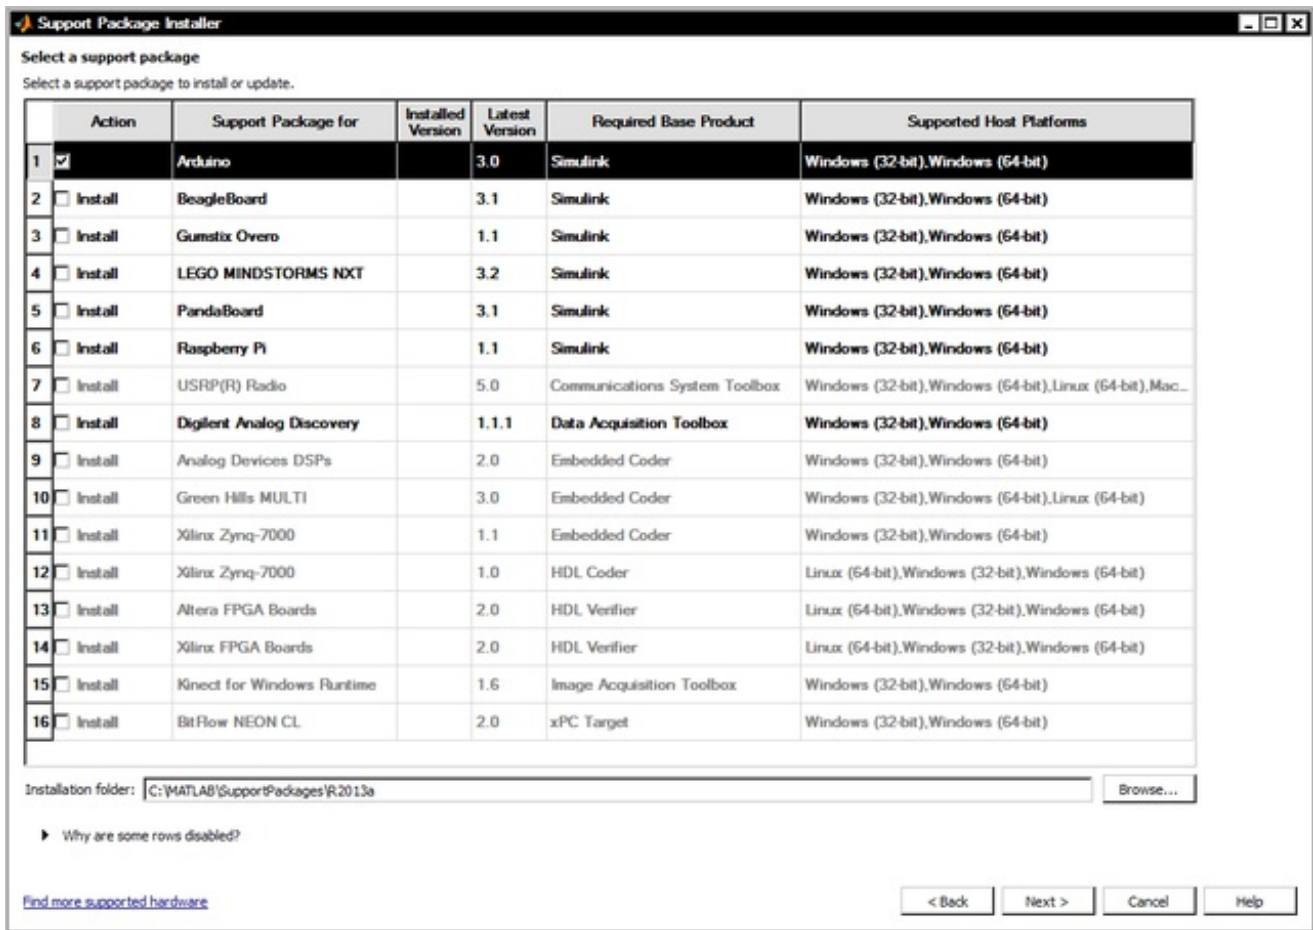

Start Support Package Installer

Click on Get Hardware Support Packages in the drop down menu to start the installer. Select 'Internet' as a source for installing the support package

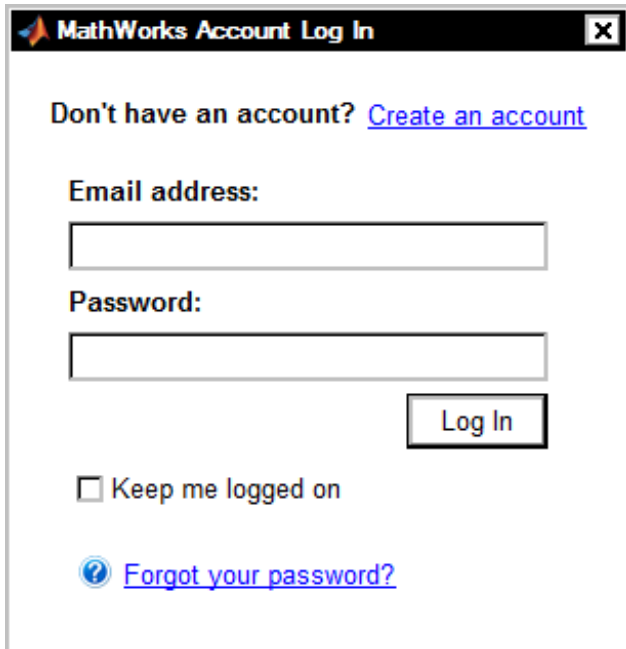

Select Arduino from a list of support packages

Click Next to see a list of support packages and select Arduino from the list

MathWorks Account

Click next and log in to your MathWorks account. If you don't have a MathWorks account, you can create one during the install process or by [visiting this page on the MathWorks website \(http://adafru.it/d5K\)](http://adafru.it/d5K).

MathWorks Account Log In

[? Forgot your password?](#)

Continue and Complete the Installation

Accept the license agreement on the next screen and click Next through the following screens to finish the installation

Support Package Installer

Install/update complete

Simulink Support Package for Arduino Hardware has been successfully installed.

☒ Show support package examples

Finish Help

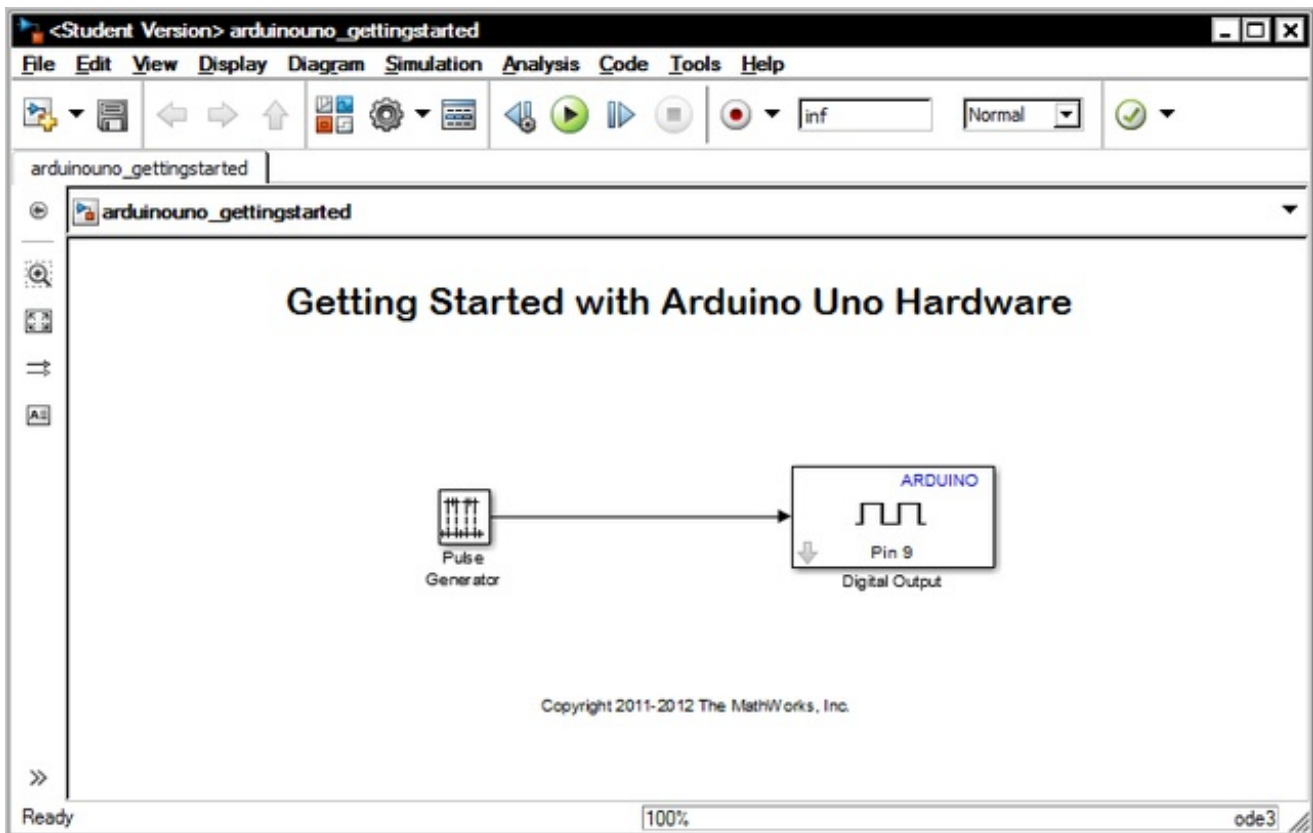

Simulink model

Open a Simulink demo model

Enter `arduinouno_gettingstarted` at the MATLAB command prompt to open a model that uses a Pulse Generator block to create a signal that varies between zero and one every second. Double-click the Pulse Generator block to explore its pre-configured parameters.

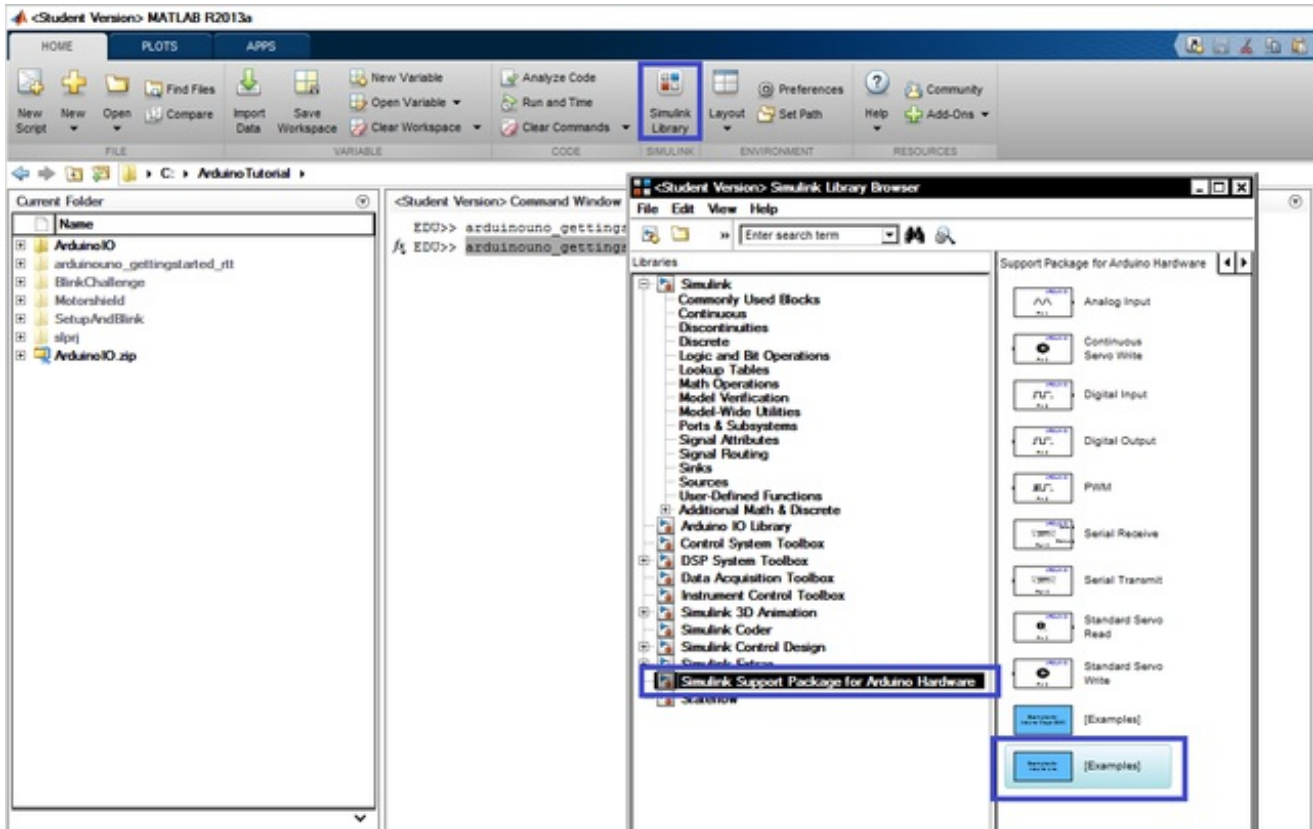

The Digital Output block is set up to send the output of the Pulse Generator to pin 9 of the Arduino Uno. Double-click the block to explore its pre-configured parameters.

You are now ready to program your Arduino Uno!

Optional - Create the model on your own

- Click on the Simulink Library icon to open the Simulink library browser
- In the left navigation pane, select Simulink Support Package for Arduino Hardware
- On the right navigation pane, double-click the second [Examples] entry to open the documentation

Open step-by-step guide

Click 'Getting started with Arduino Uno Hardware' in the list of demos to open the step-by-step guide to build this model on your own.

Examples

- Simulink Support Package for Arduino Mega 2560 Hardware
- Simulink Support Package for Arduino Uno Hardware**

Simulink Support Package for Arduino Uno Hardware EXAMPLES

Simulink® lets you design and run models on Arduino® hardware. With this capability, you can assess and optimize algorithms in the classroom or lab as they execute in real-time on Arduino hardware with physical I/O.

Generate code, Load and Run

Prepare the model to run on Arduino Uno

- Select Tools > Run on Target Hardware > Prepare to Run....
- Review the parameters in the dialog that opens
- Unless already set, set the Target hardware parameter to Arduino Uno
- Do not change any other settings
- Click OK
- Save the model

Run the model on Arduino Uno

- Connect the Arduino Uno board to your computer with a USB cable
- In your Simulink model, select Tools > Run on Target Hardware > Run
- Look at the LED attached to pin 9. The LED should blink one time every second
