Pack your bag

DIY wearables are inherently prone to mishaps and repairs, so when you're packing your bag for Maker Faire, Burning Man, or just an all-night party, consider packing some of these things to keep your project excellent the whole way through:

- extra batteries
- alligator clips ([normal \(\)](#), [short \(\)](#), or both)
- [multimeter \(\)](#)
- spare parts - whatever components comprise your design
- small scissors
- safety pins
- [heat shrink tubing \(\)](#) & lighter
- [needle \(\)](#) and thread
- [pliers \(\)](#)
- [flush snips \(\)](#)
- [wire strippers \(\)](#)

To organize your repair kit you may find these useful:

- [bi-fold compartment parts box \(\)](#)
- [small modular snap boxes \(\)](#)
- [medium modular snap boxes \(\)](#)
- [large modular snap boxes \(\)](#)
